EXCEPTIONAL PERFORMANCE IN **SILICONE PROTECTION**

Everest High Solids Silicone Systems were formulated with the most demanding job conditions in mind. Everest listened to the roofing industry, and took notes. Decades of experience in roof coating chemistry, application and packaging have resulted in a product that will impress even the most discerning user.

PRIMERLESS

Our High Solids Silicone Formulation saves time and money by ensuring a high bond to all roof types without the aid of an adhesive primer. Where other silicones have failed, Everest High Solids Silicone will hold fast.

NO MIXING REQUIRED

Paddle mixing takes several minutes per container to make other products usable. Everest High Solids Silicone does not require paddle mixing, and will save time and increase job efficiency. Imagine how much money will be saved over the course of an entire roof!

SUPERIOR VERTICAL HANG

Everest High Solids Silicone can be applied on vertical surfaces at a rate of 50 mils and not slide off! Our competitor's silicone must be applied in several coats to vertical surfaces, or they will skin over and slide down, creating an unsightly puddle at the base of your walls.

TIMELESS WEATHERABILITY

Everest High Solids Silicone will not lose thickness, flexibility or adhesion over time. It's inert nature ensures that sun exposure, freezing temperatures, and thermal expansion will not damage the Everest High Solids Silicone System. This means that our customers sleep better at night, knowing they have the highest quality in silicone protecting their projects.
